ECO2POWER

Authorized in
Organic
Agriculture
CE 889/2008

- **ECO2POWER** is a naturally occurring product and has been recognised as a European base substance under EU 563/2014.
- It contains Chitosan hydrochloride (2.25%) dissolved in water.
- **Effects observed in our trials (after regular preventive use):**
 - Increased plant vigour, better leaf appearance.
 - Measurable increase in stem and leaf thickness with increased resistance to perspiration (-25%) and against light frost (-2oC).
 - Continuous plant growth rate even during very hot periods.
 - More nutrients in the leaves and maturity reached faster.
 - Normal growth in soils infected with pathogenic nematodes.
 - Increased proportion of symbiotic organisms and biodiversity in the soil.
 - Reduced curative needs from -50% to -100%.
 - No negative effects observed in the production of fruits, vegetables, flowers and lawns.
 - The scientific literature indicates other additional features.
- **Composition:** 1 can contains 225 grams of ChitosanHC dissolved in 10 L of water. (concentration: 22.5g/litre)
-
- Instructions Standard (see also with your advisor)
 - Soil application: 1 can for 1 application out of 3 Ha.
 - Leaf application: 1 can for 1 application on 3 Ha, repeat every 2 weeks or once a month depending on the crop.
 - See also on the label
- **Note:** ECO2POWER can be mixed with other products provided the pH of the mixture does not exceed 6. First mix all other products in water, measure pH < 6 (after adding citric acid, for example) and then add ECO2POWER. Mix well.
-
- **Security:** Read and follow the instructions of this product sheet and label. Non-harmful product environment. Not suitable for consumption. Avoid eye contact and in the case rinse with water. See "Material Safety Data Sheet."
-
- **Storage:** at room temperature and excluding direct light. Close the can well after use.
-
- **Preservation time:** Max 3 months after delivery for closed cans. Use open cans within 30 days.
-
- **Packaging:** 10-L plastic cans.
-
- **Producer:** see above.
-
- **Preventive use: regular use.**
 - Good soil permeability, good balance in minerals and the presence of bacteria such as Bacillus, Fluo Pseudomonas, Actynomictes, Mycorrhiza, Rhizobacteria,... are important factors in achieving good results.
